

Scientific Food Center

Having worked in the nutrition and food industry for over 30 years, Dr. Hani Dmour decided to establish a dedicated Scientific Food Center that would specialize in food research. His goal was to offer a comprehensive array of cutting-edge services including lab testing, consultation, food analysis, as well as product research and development. By doing so, Dr. Hani would help entities operating within the food industry to obtain international quality certificates such as ISO 22000, HACCP and GMP, enabling them to export their products to international markets.

As such, Dr. Hani sought funding from the European Union (EU) and the Jordan Enterprise Development Corporation (JEDCO). As soon as the grant was approved, construction commenced and the Scientific Food Center was later outfitted with state-of-the-art analysis and testing machinery such as a protein and nitrogen testing device, a fat and fiber measuring device, and a spectrophotometer, among others.

The fund from JEDCO and the EU also facilitated the establishment of a top-notch training hall equipped with all the necessary tools to deliver workshops on food safety, quality and assessment, in addition to educational sessions for industry workers on food testing and sampling. Furthermore, the grant helped finance the Center's marketing activities, which involved designing and printing brochures and flyers; launching a promotional website that provides information on the Center's diverse offerings; and creating official social media fan pages and accounts.

Dr. Hani aspires to transform the Scientific Food Center into an internationally acclaimed research institution that extends a premium selection of services to countries worldwide. He also seeks to launch a global scientific journal dedicated to covering the Center's latest advancements within the nutrition and food industry.
